

Grade 4

Teacher: Donna Liszewski

Topic: Fables

Technology Devices Needed: Laptops & Digital Video Cameras

LoTi Level: 4

Directions: After learning and reading several fables, the students work together in a group to create a fable of their own! The students also create props and masks using computer software programs. Then, they act out the fable in front of the class while recording it using a digital video camera. Once all the fables are recorded, the students create an iMovie of their fable. The students also perform the fable for their first grade buddies. This project not only uses technology, but it also infuses Character Education as well!
